

Rust Advanced Numerical Reasoning Appraisal (RANRA)

When being “good with numbers” is part of the job description, use RANRA

Graduate & Junior Manager to Executive | 30 minutes

RANRA measures higher-level numerical reasoning – a vital ability for employees who need to make decisions using financial statements, trends and statistics, sales data, performance metrics and other information.

It is not a maths test but was constructed to measure intelligence through numerical reasoning. It contains two scales; sufficiency of information and comparison of quantities.

.....

Uses: Recruitment

Available online and paper and pencil

Zoom in on:

- A person’s ability to select important data for decision making
- Candidate’s who can learn numerical and financial concepts quickly
- The financial “literacy” of non-financial managers

RANRA can accurately predict a candidate’s ability to identify the most important information from a set of data, compare complex quantitative information and break down information into essential parts.

RANRA is proven to predict the ability to use quantitative reasoning to solve problems, learn numerical concepts quickly, recognise similarities and differences, and accurately assess the value of assets.
